Frontend Developer | CMS Enthusiast

Github | **Portfolio** | **LinkedIn** | **FB**

Gazipur, Dhaka, Bangladesh.

Career Objective --

MERN Stack Developer driven by impact and innovation—committed to crafting fast, open-source tools that break conventions. I believe in building systems that empower people: free, hackable, and engineered for efficiency—much like the philosophies behind Arch and Nix. Code should serve people, not profit.

Skills ---

Frontend: React, Next.js, React Router, Tailwind CSS, Axios, TanStack Query, React Motion

Backend: Node.js, Express.js, Firebase

Database: MongoDB

Authentication & Hosting: Firebase, JWT, Surge, Netlify

Tools & Environment: Nvim, Tmux, Zsh, Git, Linux (Hyprland), Vite, VsCode

Soft Skills: Strong communicator · Creative and innovative thinker · Proven problem solver · Expert in customized, automated workflows · Highly efficient with terminal-driven development

Professional Training --

Full Stack MERN Development: Trained in building modern, scalable web applications using MongoDB, Express.js, React, and Node.js. Focused on real-world project architecture, REST APIs, authentication, and deployment.

Projects ---

DeshGuide   **Live** | **Github** | **Server** | **Video Demo**

A full-stack tourism platform enabling real-time booking, storytelling, and role-driven dashboards.

Key Features:

- Implemented secure, multi-role authentication (Tourist, Guide, Admin) with JWT-protected routing.
- Engineered seamless package booking, interactive story sharing, and tour guide applications.
- Integrated Stripe for robust, real-world payment handling and checkout flows.
- Designed modern, responsive UI with Tailwind, Framer Motion, and animated components.

Technology used: React, Node.js, Express.js, MongoDB, Firebase Auth, Stripe, Tailwind CSS, JWT, React Router, TanStack Query, Framer Motion

FlavorBook   **Live** | **Github** | **Server** --

A full-featured platform for recipe sharing, chef booking, blogging, and ingredient marketplace.

Key Features:

- Explore chef profiles and book them via checkout flow
- Share and browse recipes with tags and categories
- Read food-related blogs with comments and likes
- Buy and sell recipe ingredients in a modern marketplace

Technology used: React, Node.js, Express.js, MongoDB, Firebase, Tailwind CSS, JWT, TanStack Query, React Router, Framer Motion

EduVerse   **Live** | **Github** | **Server** --

An online assignment and group study portal with collaborative features.

Key Features:

- Assignment creation and submission via Google Docs
- Peer-based evaluation with feedback and marking
- View submitted and evaluated assignments in dashboard
- JWT-based secure authentication and protected routing

Technology used: React, Node.js, Express.js, MongoDB, Firebase, Tailwind CSS, JWT, React Router, TanStack Query, Framer Motion

Languages --

- Bengali — Native
- English — Fluent

Technical Interests & Personal Projects --

- Created a CLI-first Linux dev workflow with Hyprland, Neovim, Tmux, SurfingKeys etc. (Dotfiles)
- Engineered a dotfile-driven environment with custom keybindings and terminal automation to boost coding efficiency.
